

# CARBON

ADVANCED COMPOSITE™

Sleek lines, beautiful finish and lightweight! When you see Necky's new carbon lay up, you'll do a double take. Our Advanced Composite lay-ups are specifically designed to take a beating in rock gardens, surf poundings, and expedition use. Consulting with experts in both the aerospace and yacht industries, Necky produces laminates that yield significantly stronger, stiffer and lighter kayaks far exceeding what's typical in the industry. Our unique Advanced Composite carbon kayaks feature materials that are carefully layered in. We also layer an additional core in specific areas to increase the overall stiffness. The result is an extremely strong kayak that can endure a significant amount of impact.

## FEATURES

- Advanced Composite carbon lay up
- Necky touring seat with supportive back band
- Adjustable thigh braces
- Reflective deck rigging including a perimeter safety line and deck bungee with paddle storage for and aft
- Hatch configuration varies by model
- Retractable skeg or rudder depending on model
- Adjustable foot pedals
- Recessed no-snap deck fittings
- Integral bulkheads
